

Target: Passive reconnaissance was conducted using publicly available information concerning the OWASP Juice Shop project. Active network enumeration was restricted to the locally deployed Juice Shop instance maintained as part of the project's authorized testing laboratory.

Testing Environment: Parrot OS running in UTM

Purpose: Educational penetration-testing toolkit development

Authorization: Testing is limited to systems controlled by the project owner or explicitly authorized for testing.

Testing Boundary: Reconnaissance and enumeration are restricted to the designated laboratory environment.

Excluded Systems: Unrelated public systems, third-party networks, and personal devices.

Reconnaissance Methodology

1. Define authorized scope.
2. Collect passive information from multiple OSINT sources.
3. Record the source, date, information discovered, and relevance.
4. Identify known IP addresses/domains/technologies.
5. Perform authorized network discovery.
6. Perform port enumeration.
7. Identify services and versions.
8. Create an asset inventory.
9. Analyze potential security implications.
10. Identify areas requiring further investigation.

Passive Reconnaissance

Target: `owasp-juice.shop`

Domain Dossier identified the target's IPv4 address as `81.169.145.156` and IPv6 address as `2a01:238:20a:202:1156::`.

RDAP information identified the domain as active and associated it with CRONON GmbH as the registrar. The domain's listed nameservers were `docks10.rzone.de` and `shades01.rzone.de`.

Network registration information associated the IPv4 address with STRATO AG's `81.169.144.0/22` network and AS6724.

Certificate Transparency: CertKit was reviewed for `owasp-juice.shop` to identify publicly logged certificates and associated hostnames. The results identified the hostnames `mj26.owasp-juice.shop`, `mj26opo.owasp-juice.shop`, and `multi-juicer.owasp-juice.shop`. The results also contained a wildcard certificate for `*.owasp-juice.shop` issued by Sectigo Limited. Multiple certificates were observed for several of the identified hostnames, indicating repeated certificate issuance over the observed period.

These hostnames were treated as potential assets for further investigation, rather than confirmed vulnerabilities. No active scanning of the discovered hostnames was performed as part of this passive reconnaissance step.
