

Job Description

1. Job Title and summary

An **ethical hacker (penetration tester)** is a professional who simulates real cyberattacks against an organization's systems to identify vulnerabilities before malicious hackers can exploit them. They use the same techniques as attackers, but within a legal, controlled scope, and provide recommendations to strengthen the organization's security. This is needed to protect the important data of many companies in many different fields

2. Responsibilities

- Conduct penetration testing across web applications, mobile applications, APIs, networks, wireless environments, and cloud platforms.
- Perform reconnaissance, threat modeling, exploitation, and post-exploitation analysis within approved scopes.
- Use manual testing techniques along with industry-standard security tools.
- Prepare detailed technical reports including findings, evidence, impact analysis, and remediation guidance.
- Validate remediation efforts through retesting.
- Perform vulnerability assessments and security reviews to identify weaknesses and potential attack paths.

3. Required Skills and Tools

Python, Bash, PowerShell, JavaScript, SQL, c/c++(Optional but valuable), Nmap, Burp Suite, Wireshark, Metasploit Framework, Gobuster/Dirb, Hashcat, BloodHound, Nessus, Critical thinking, Communication, Attention to Detail, Curiouscity

4. Sample Deliverables

Screenshots of exploited vulnerabilities, create an Executive Summary, Penetration testing reports, Security improvement recommendations, Proof-of-concept demonstrations

5. Ideal Work Environment

This position could be found at large companies, government centers, or dedicated cybersecurity companies. The work style can be described as independent within a collaborative team. An ethical hacker will often be working alone for a long time on a project, but closely coordinated with teammates/clients.

6. Growth Style and Rigor

The pace of a penetration testing job is generally moderate with occasional high-intensity periods. Penetration testing is usually planned weeks in advance. That means you have time to work methodically—but there are still deadlines and periods of concentrated effort. Penetration testing is a profession where you're given a structured objective, a lot of freedom in how you achieve it, support from experienced teammates, and pressure to deliver quality results by the deadline.
