

Target: Passive reconnaissance was conducted using publicly available information concerning the OWASP Juice Shop project. Active network enumeration was restricted to the locally deployed Juice Shop instance maintained as part of the project's authorized testing laboratory.

Testing Environment: Parrot OS running in UTM

Purpose: Educational penetration-testing toolkit development

Authorization: Testing is limited to systems controlled by the project owner or explicitly authorized for testing.

Testing Boundary: Reconnaissance and enumeration are restricted to the designated laboratory environment.

Excluded Systems: Unrelated public systems, third-party networks, and personal devices.

Reconnaissance Methodology

1. Define authorized scope.
2. Collect passive information from multiple OSINT sources.
3. Record the source, date, information discovered, and relevance.
4. Identify known IP addresses/domains/technologies.
5. Perform authorized network discovery.
6. Perform port enumeration.
7. Identify services and versions.
8. Create an asset inventory.
9. Analyze potential security implications.
10. Identify areas requiring further investigation.

Passive Reconnaissance
